		Ans:The working of the heart and the circulation of blood	
		Ans: The working of the heart and the circulation of blood can be explained through the following steps- i)The right auricle receives deoxygenated blood from all parts of the body and the left auricle receives oxygenated blood from the lungs by pulmonary veins. ii)Next,both the auricles contract together,their valves open and blood flows into the respective ventricles. iii)Then both auricles and ventricles contract. iv)The oxygenated blood from the left ventricle is pumped into aorta and is distributed to all body parts by arteries. v)The deoxygenated blood from the right ventricle is transferred to the lungs by pulmonary artery for oxygenation.	
		e)Write three functions of a blood? Ans:Three functions of a blood are- i)It provides food and oxygen to everybody cell. ii)It removes waste from the cells. iii)It helps in regulating body temoerature.	
		f)What are capillaries? Ans:Capillaries are the smallest blood vessels that connect arteries and veins.They help in the exchange of gases,nutrients and wastes. g)Define heartbeat? Ans:The rhythemic contraction and relaxation of the auricles and ventricles is known as heart beat.
